Reading The Files Timer: 2332ms
Inserting To Database timer: 45-40 minutes, with&without constraints, difference wasn't huge.
But several sources suggest that constrains are "50%" faster, however it's argued, some say it's hardware.

Imp difference wasn't that huge but I still recommend constrains so no wrong data type is inserted where it doesn't belong.
The sizes are fixed, easier for the hardware to read (quicker) from that perspective but it also comes down to hardware.

NOTE:
1. **Did not succeed 2nd and 3rd Database files**, kept getting memory overload or some error message which I do not have on top of my mind right now (I discussed it in slack)
2. **Queries.js** is not to be confused with actual output, in order to get the data, I had to use sqlite3.exe via the terminal to use SQL commands, it couldn't be done to produce actual data with JavaScripts/IDE/Terminal.
